Product designer who ships. I lead design at **Aerrand**, a same-day delivery platform with customer and driver apps live on the App Store and Google Play, and I design it end to end: research, flows, information architecture, UI and the design system, then the front-end code that brings it to life. I add two years of UI/UX design and full-stack engineering, and the habit, from supervising a Stellantis assembly line, of designing for how people actually work.

Experience

Lead Product Designer | Aerrand, Windsor, ON — March 2025 – Present

Same-day delivery platform, in beta since August 2026. iOS: Aerrand, Aerrander. Android: Aerrand, Aerrander.

- Designed two shipped apps, a customer app and a driver (Aerrander) app, in beta on both stores since August 2026, plus a live business dashboard and admin tools; validated through a 100+ delivery pilot.
- Leading the 2.0 redesign from pilot findings: a mode switch that makes the choice of service the first decision, AI-drafted inspection checklists, and bulk booking of up to 10 aerrands for businesses.
- Designed **Aerrand Guard**, an inspect-before-you-accept flow for marketplace purchases: the Aerrander photographs a checklist at pickup, the buyer approves, and payment is held until delivery.
- Built and maintain the Aerrand design system in Figma: colour and text tokens, components and variants, and usage rules that keep five surfaces consistent.
- Own the work from requirements and user stories to handoff, prototype in Figma and build front-end code, and run two concurrent teams (development and marketing).

Production Supervisor | Stellantis, Windsor Assembly Plant, ON — August 2025 – August 2026

- Supervised daily production in a high-volume, unionized assembly plant contributing to 400+ vehicles per shift, leading up to 79 people on a single line and coordinating 17 team leads.
- Balanced output, quality and safety in real time and drove root-cause fixes and continuous improvement with Lean and 5S, working with skilled trades, material handling and union representatives.

Full-Stack Engineer and UI/UX Designer | Right Click IT Solutions and Services — November 2022 – November 2024

IT contractor to government organizations in Nigeria. Client work is confidential.

- Designed enterprise resource planning (ERP) software for government bodies in Nigeria's oil and gas sector: user flows, information architecture and Figma prototypes for complex, data-heavy workflows, built through to front end and backend.
- Turned business requirements into user flows, information architecture and responsive interfaces, then built them across front end, backend and APIs.
- Wrote product and technical documentation on requirements, workflows and system behaviour for engineers and stakeholders.

Skills

Design	Product and UI/UX design, user flows, information architecture, wireframing, interaction design, prototyping, design systems, usability, accessibility
Tools	Figma, Figma Make, Framer; design tokens, components and variants, developer handoff
Engineering	JavaScript, TypeScript, React, Python, SQL; front-end and full-stack development, API integration
Product	Requirements and user stories, prioritization and roadmaps, success metrics, cross-functional collaboration, app store launches

Education

Master of Engineering, Electrical and Computer Engineering
University of Windsor, 2025 – 2026

Bachelor of Engineering, Electrical and Computer Engineering
Afe Babalola University, Nigeria, 2018 – 2023

Certifications

- OJT Certification, Trim and Final Assembly Stations, Stellantis Windsor (2026)
- WHMIS, Health and Safety Compliance (2026)
- Health and Safety Awareness, Ontario Ministry of Labour (2026)
- Lithium-Ion Battery Safety Awareness (ESAFE321); Safe Work Qualified Persons (ESAFE402)
