Product manager who has shipped. I lead **Aerrand**, a same-day delivery platform with customer and driver apps live on the App Store and Google Play, and I lead it from strategy and discovery through design and front-end code. I add two years of full-stack engineering and UI/UX design, and the operations discipline of supervising a high-volume Stellantis assembly line: deciding fast, finding root causes and keeping large teams aligned.

Experience

Product Manager and Lead Designer | Aerrand, Windsor, ON — March 2025 – Present

Same-day delivery platform, in beta since August 2026. iOS: Aerrand, Aerrander. Android: Aerrand, Aerrander.

- Took the product from concept to an August 2026 beta launch: customer and driver (Aerrander) apps on both stores, a live business dashboard and the admin tools that run the platform. Ran a 100+ delivery pilot, onboarded 4 businesses and signed up 100+ Aerranders.
- Set the product strategy around trust rather than speed, across five connected surfaces for customers, Aerranders, businesses and operations.
- Designed **Aerrand Guard** for second-hand and marketplace purchases: the Aerrander inspects and photographs the item at pickup, the buyer approves before it ships, and payment is held until delivery is accepted.
- Sequenced the roadmap to ship one complete, trusted delivery first; now leading a 2.0 redesign shaped by the pilot, including AI-drafted inspection checklists and bulk booking for businesses.
- Manage two concurrent teams (development and marketing); write requirements, user stories and acceptance criteria, design flows and UI in Figma, and contribute front-end and backend code.

Production Supervisor | Stellantis, Windsor Assembly Plant, ON — August 2025 – August 2026

- Supervised daily production in a high-volume, unionized assembly plant contributing to 400+ vehicles per shift, leading up to 79 people on a single line and coordinating 17 team leads.
- Balanced output, quality and safety in real time; assigned work, coached hourly employees and resolved line issues with skilled trades, material handling and union representatives to minimize downtime.
- Tracked production metrics, staffing, quality and equipment, and drove corrective actions using Lean and 5S.

Full-Stack Engineer and UI/UX Designer | Right Click IT Solutions and Services — November 2022 – November 2024

IT contractor to government organizations in Nigeria. Client work is confidential.

- Designed and built enterprise resource planning (ERP) software for government bodies in Nigeria's oil and gas sector, from requirements and Figma prototypes through front end, backend, API integration and testing.
- Turned business requirements into user flows, information architecture and responsive interfaces, and wrote the product and technical documentation engineers built from.

Skills

Product	Product strategy, discovery, prioritization and roadmaps, requirements and user stories, acceptance criteria, success metrics, go-to-market with app store launches
Design	UI/UX design, user flows, information architecture, wireframing, prototyping, design systems, usability; Figma, Figma Make, Framer
Engineering	JavaScript, TypeScript, React, Python, SQL, MATLAB; front-end and full-stack development, API integration, technical documentation
Operations	Team leadership and coaching, root-cause problem solving, Lean and 5S, continuous improvement, safety compliance, stakeholder communication

Education

Master of Engineering, Electrical and Computer Engineering
University of Windsor, 2025 – 2026

Bachelor of Engineering, Electrical and Computer Engineering
Afe Babalola University, Nigeria, 2018 – 2023

Certifications

- OJT Certification, Trim and Final Assembly Stations, Stellantis Windsor (2026)
- WHMIS, Health and Safety Compliance (2026)
- Health and Safety Awareness, Ontario Ministry of Labour (2026)
- Lithium-Ion Battery Safety Awareness (ESAFE321); Safe Work Qualified Persons (ESAFE402)
